

Software Features

- Web-based
- Scalable database-driven architecture
- Installs at your location, no offsite data security risk
- Intuitive visual mapping interface for quickly locating items
- Organizes tracked items into groups for easy selection and reporting
- Alert in real-time via configurable rules, or run and deliver automated reports on a fixed schedule
- Define logical boundaries on a map to monitor asset-environment interaction
- Take advantage of precise location to monitor asset-to-asset interaction
- Use location- and behavior-driven status and activity metrics to automate current manual processes
- Manage user access and authorization with a flexible per-group and per-map rights management system
- Customize the interface to use domain-specific keywords and terms, or translate into a different language, all via the Web
- Integrate with Active Directory for single-sign-on applications

“Meaningful clinical support intelligence begins with reliable, accurate data that provides healthcare clients a tool to impact productivity and profitability.”
